## Tap Developer's Prep Worksheet

This form should take between 5 and 10 minutes to complete, and will walk you through collecting all the data you need to build your custom Singer tap using the Meltano SDK.

For more information about the SDK: https://sdk.meltano.com

Section 1: General Information
Your tap name  Tap names should be all lowercase, starting with "tap-". Examples: tap-salesforce, tap-mysql, tap-facebook-pages, etc.  tap-rickandmorty
Source name *  Rick and Morty API
API Type
<ul><li>REST</li><li>GraphQL</li></ul>
Other:
URL Root This is the base-level API root. For example: <a href="https://graph.facebook.com/api/v3">https://graph.facebook.com/api/v3</a> <a href="https://rickandmortyapi.com/api">https://graph.facebook.com/api/v3</a>
Section 2: Authentication

Authentication type
OAuth 2.0
○ JWT
O Simple Auth
N/A - No Auth Needed
Other:
Auth verification type  Note that, if required, creating an application or service account can be a difficult process and can sometimes require system administrator support. If this describes your source, it's a good idea to confirm you can create the needed account and token before beginning development.
User's token, created and downloaded from the website
O User's name/email and password
Application or Service Account Token
None or N/A
Other:
Section 3: Stream Info Start with one sample stream which will be used to verify your first working data pipeline.
Stream name  For now, just describe the first stream that you would like to add. This will be your proof of connectivity and a working data stream before adding additional streams.  Characters
Stream endpoint path (REST) Enter "N/A" if this does not apply, or if the stream is not a REST stream. /character
Stream sample query (GraphQL) Enter "N/A" if the stream is not a GraphQL stream.  N/A

Link to sample result and/or field-level documentation
This will be needed when you begin to describe the stream's fields and properties.
https://rickandmortyapi.com/documentation#get-all-characters
Incremental replication key
Does your source have a column to indicate when data has changed? If so, enter the name of the column or field. Otherwise, enter "N/A". For example: "UpdatedOn" or "last_update_date".
N/A
Primary key
Does your source have a unique primary key column or identity column? If so, enter the name of the column or field. Otherwise, enter "N/A". For example: "Id" or "customer_id".
id
Section 4: Pagination and Rate Limits
Section 4: Pagination and Rate Limits
Pagination method
Pagination method
Pagination method  The "Next Page Number" method is generally easiest to implement. Other methods are supported but may require additional custom code.
Pagination method The "Next Page Number" method is generally easiest to implement. Other methods are supported but may require additional custom code.  Paginate using a "Next Page Number"
Pagination method The "Next Page Number" method is generally easiest to implement. Other methods are supported but may require additional custom code.  Paginate using a "Next Page Number"  Paginate using a "Next Page URL"  Paginate "since" the last-seen ID or timestamp
Pagination method The "Next Page Number" method is generally easiest to implement. Other methods are supported but may require additional custom code.  Paginate using a "Next Page Number"  Paginate using a "Next Page URL"  Paginate "since" the last-seen ID or timestamp
Pagination method The "Next Page Number" method is generally easiest to implement. Other methods are supported but may require additional custom code.  Paginate using a "Next Page Number"  Paginate using a "Next Page URL"  Paginate "since" the last-seen ID or timestamp
